B . Reading Comprehension:(16m)
Read the following passage carefully, then do as required below:

More than 1,100 species of bats can be found in almost every part of the world. Bats are unique because they are the only flying mammals. Mammals give birth to their babies and give them milk. The smallest bat in the world has a wingspan; which is the distance between the two ends of the wings, of only two inches and weighs less than a coin. The largest bat has a wingspan of about 1.83cm.
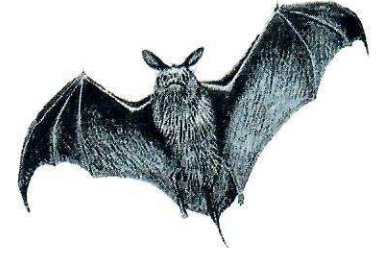

Most bats eat insects, but some types feed on fruit, pollen, and nectar, and others eat small animals like fish, frogs, and rats. Although many scary stories tell of blood eating bats, in fact, only three types feed on the blood of other animals. Bats are useful creatures. **They** hunt a lot of insects every evening. A brown bat can catch and eat 2,000 insects a night. In addition, some bats pollinate plants and flowers. They **suck** the liquid nectar from one plant and then transfer the plant's pollen to the other.

Bats are nocturnal creatures, which means that they are asleep during the day and active during the night. They have the difficult task of flying and catching all their meals in the dark. This is not a problem for them, because they use a special sound system. Bats make sounds that reflect off objects, no matter how small they are. Bats use the reflected sounds to form pictures in their brains of where things are located. It is a very accurate process that allows them to find and hunt a mosquito flying through the air in complete darkness.

A) Choose the correct answer from a, b, c and d:(6x2=12m)

9.The best title for the passage could be:

   a. The Pollen and the Nectar
   b. **Bats of the Wild**
