1- Reading Comprehension (16 Ms)

44 of 55 Read the following passage carefully then answer the questions below:

Polar bears will be extinct by the end of the 21st century if the global warming continues to this constant rate. Temperatures are rising in the Arctic. **It** is the only place where polar bears are found. This change of nature is having a strong effect on the health and numbers of the world's population of polar bears.

During the winter, polar bears live and hunt on the sea ice. They travel for many kilometers to catch their main food, which is the seal. Through the ice, polar bears can feel the movement of a seal. They sit close to a hole in the ice and wait for the seal to come up for air.

In summer, as the ice melts, some bears return to the shore, fasting until the colder weather and sea ice return. Others continue to hunt. They swim in the icy water until they reach floating sea ice where they can wait for a seal. Bears who have been fasting all summer weigh less and are weak. They have lost too much of their fat, which is needed to keep them warm and as a source of energy.

Global warming has **increased** the temperature in the Arctic so much that the warmer weather comes sooner each year and it lasts longer. following passage then answer the questions below:

Louis Braille was born in 1809 in a village in France. When he was only three years old, he had an accident while he was playing in his father's shop and became blind. His father tried to teach poor Louis how to read but he couldn't. Young Louis was very clever. He was also very good at music. At that time the blind were trying to read and write in different ways, but it was very difficult for them. Something should happen to enable the blind to read.

When Louis was sixteen years old, he had the idea of using dots, so he invented this kind of reading and writing by touching dots with the fingers. This is really the same way the blind use today. In 1828 Louis worked as a teacher for the blind. He died in January 1852 at the age of forty-three. Nowadays millions of blind people can read Braille in many languages. 47 of 55 following passage then answer the questions below:

The dictionary is the most important tool for all language learners. It gives them the different meanings and spellings of words. Most dictionaries help to pronounce words correctly by providing pronunciation and phonetic symbols. Moreover, they show the learners how to use the words correctly by giving them examples in meaningful sentences.

When you find a new word in a comprehension passage, it is not a good way to think directly of using the dictionary all the time to know its meaning. If these two ways are not helpful, get the dictionary then and look it up. You will find different meaning for one word. You infer the suitable meaning through the text.

Some books have a mini-dictionary at **their** backs. The electronic dictionaries are the **latest**. People grow two sets of teeth during their lifetimes – the primary or baby teeth, and the second, permanent teeth. The first primary teeth appear when a child is about six months old. The rest of them grow between the sixth and the thirtieth month, and there are only twenty teeth in this set.

The permanent teeth in humans appear between the sixth and the fourteenth years of a child's life. In many cases, children still have their baby teeth as well as the permanent set, or some of them, until they are about ten or twelve. This can look very odd, because the permanent teeth are often bigger than the baby teeth, and because the first of the second set to appear are usually the two front teeth, making the child look very funny. There are thirty-two teeth in the second set, although the four wisdom teeth don't usually appear until the person is in his or her late teens or early twenties. It is as well to remember that this set is the one you will have for the rest of your life, so great care must be taken to make sure that they won't go bad or have to be pulled out!

following passage carefully then answer the questions below:

From far out in space, Earth looks like a blue ball. Since water covers three-fourths of the Earth's surface, blue is the colour we see most. The continents look brown, like small islands floating in the huge, blue sea. White clouds **wrap** around the Earth like a light blanket. The Earth is shaped like a sphere, or a ball. **It** would take years to walk around the whole planet.

A spaceship can fly around the widest part of the sphere in only 90 minutes. Even though spaceships have travelled to the Moon, people cannot visit the Moon without special suits. The Moon has no air or water. Plants and animals can't live there either. Astronauts first landed on the Moon in 1969. After that, there were six more trips to the Moon. They brought back Moon rocks, which scientists are still studying.

The Sun is the closest star to Earth. A star is a hot ball of burning gas. The Sun looks very big. But the Sun is just a medium-sized star. The burning gases from the Sun are so hot that they warm the Earth. Even though the Sun is always glowing, the night here on Earth is dark. That's because the Earth turns around, every 24 hours. During the day, the Earth faces the Sun. Then we see light. During the night, the Earth turns away from the Sun. Then it faces the darkness of space.
